step 1 | Positioning

How you set up your speakers can affect the bass and the sound field. Note the following points:

- Place speakers on flat secure bases.
- Keep your speakers at least 10 mm ($13/32''$) away from the system for proper ventilation.
- Placing speakers too close to floors, walls, and corners can result in excessive bass. Cover walls and windows with thick curtains.
- For optional wall mount, refer to page 19.

Setup example ("Surround layout (Recommended)"): Standard surround placement)

Place the front, center, and surround speakers at approximately the same distance from the seating position. The angles in the diagram are approximate.

- ※1 Position with at least 5 cm (2") of space on all sides for proper ventilation.
- ※2 Put on a rack or shelf. Vibration caused by the speaker can disrupt the picture if it is placed directly on the TV.
- ※3 Place to the right or left of the TV, on the floor or a sturdy shelf so that it will not cause vibration. Leave about 30 cm ($11\frac{13}{16}''$) from the TV.

Depending on the room layout, you may like to use all the speakers at the front ("Front layout (Alternative)") (⇒ 8, Easy setup).

Notes on speaker use

• Use only supplied speakers

Using other speakers can damage the unit, and sound quality will be negatively affected.

- You can damage your speakers and shorten their useful life if you play sound at high levels over extended periods.
- Reduce the volume in the following cases to avoid damage:
 - When playing distorted sound.
 - When the speakers are reverberating due to a record player, noise from FM broadcasts, or continuous signals from an oscillator, test disc, or electronic instrument.
 - When adjusting the sound quality.
 - When turning the unit on or off.

If irregular coloring occurs on your TV

The center speaker is designed to be used close to a TV, but the picture may be affected on some TVs and setup combinations.

If this occurs, turn the TV off for about 30 minutes.

The demagnetizing function of the TV should correct the problem. If it persists, move the speakers further away from the TV.

Caution

- The main unit and supplied speakers are to be used only as indicated in this setup. Failure to do so may lead to damage to the amplifier and/or the speakers, and may result in the risk of fire. Consult a qualified service person if damage has occurred or if you experience a sudden change in performance.
- Do not attempt to attach these speakers to walls using methods other than those described in this manual.

Caution

Do not touch the front netted area of the speakers. Hold by the sides.

step 2 | Connections

Turn off all equipment before connection and read the appropriate operating instructions.

Do not connect the AC power supply cord until all other connections are completed.

1 Speaker connections

Cable type	Speakers	A	B
(Attached to subwoofer)	Subwoofer	6	SUBWOOFER / ENCEINTE D'EXTRÊMES-GRAVES
Short	Center speaker	5	CENTER / CENTRE

Use of the speaker cable stickers is convenient when making cable connections.

e.g., Front speaker (L)

Verify the type of speaker with the label on the speaker before connecting the appropriate cable.

Connect the speaker cables to the appropriate speakers by referring to the above table.

Insert the wire fully, taking care not to insert beyond the wire insulation.

Be careful not to cross (short circuit) or reverse the polarity of the speaker wires as doing so may damage the speakers.

– : Blue line

2 Radio antenna connections

Using an indoor antenna

Using an outdoor antenna

Use outdoor antenna if radio reception is poor.

- Disconnect the antenna when the unit is not in use.
- Do not use the outdoor antenna during an electrical storm.

3 Audio and video connections

- To listen to the TV audio on the sound system, connect the optical digital audio cable, HDMI® cable or audio cable.

Refer to the operating instructions of the respective devices for the settings necessary to output the audio.

- ※ Only when connecting to an ARC compatible TV.
Refer to "Connection with an ARC compatible TV" for details. (⇒ right)

Recommended connection to a TV

This connection provides the best picture and audio quality.

VIERA Link "HDAVI Control"

If your Panasonic TV is VIERA Link compatible, you can operate your TV synchronizing with home theater operations or vice versa (⇒ 14, Linked operations with the TV).

- Please use High Speed HDMI Cables that have the HDMI logo (as shown on the back cover).
- Non-HDMI-compliant cables cannot be utilized.
- It is recommended that you use Panasonic's HDMI cable. Recommended part number:
RP-CDHS15 (1.5 m/4.9 ft), RP-CDHS30 (3.0 m/9.8 ft), RP-CDHS50 (5.0 m/16.4 ft), etc.
- **Do not make the video connections through the VCR.**
Due to copy guard protection, the picture may not be displayed properly.
- After connecting with the optical digital audio cable or HDMI® cable, make settings to suit the type of audio from your digital equipment (⇒ 10).
(Only Dolby Digital and PCM can be played with this connection.)

■ Connection with an ARC compatible TV

What is ARC?

ARC is an abbreviation of Audio Return Channel, also known as HDMI ARC. It refers to one of the HDMI functions. If the TV is ARC compatible, audio from the TV can be sent to this unit via the HDMI cable without the need to make an extra audio connection.

- Refer to the operating instructions of the TV for details.

■ Connection without an ARC compatible TV

Alternative connection to a TV

Set Top Box (cable/satellite/Blu-ray Disc player, etc) connection

Use this connection when you want to output the original surround audio from your STB, etc. to this unit.

Connect the optical digital audio cable (not supplied) from the DIGITAL AUDIO IN OPTICAL terminal on the main unit to the OPTICAL OUT terminal on your STB.

- If the DIGITAL AUDIO IN OPTICAL terminal is already in use for the TV audio, reconnect the TV audio to the AUX terminal using an audio cable.

If you have various sound sources (such as Blu-ray Disc player, DVD recorder, VCR, etc.), connect them to the available inputs on the TV and the TV output should then be connected to the AUX, HDMI AV OUT® or DIGITAL AUDIO IN OPTICAL terminal of the main unit.

step 3 | AC power supply cord connection

Conserving power

The main unit consumes a small amount of power, even when it is in standby mode (approx. 0.4 W). To save power when the unit is not to be used for a long time, unplug it from the household AC outlet. You will need to reset some memory items when plugging back the main unit.

The supplied AC power supply cord is for use with the main unit only. Do not use it with other equipment. Also, do not use cords for other equipment with the main unit.

step 4 | Preparing the remote control

Batteries

- 2 Insert so the poles (+ and -) match those in the remote control.

- 3 Replace the cover.

CAUTION

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

- Use alkaline or manganese batteries.
- Do not heat or expose to flame.
- Do not leave the battery(ies) in an automobile exposed to direct sunlight for a long period of time with doors and windows closed.

Do not:

- mix old and new batteries.
- use different types of batteries at the same time.
- take apart or short circuit.
- attempt to recharge alkaline or manganese batteries.
- use batteries if the covering has been peeled off.

Mishandling of batteries can cause electrolyte leakage which can severely damage the remote control.

Remove the batteries if the remote control is not going to be used for a long period of time. Store in a cool, dark place.

Use

Aim at the remote control signal sensor (⇒ 4), avoiding obstacles.

Distance: Within approx. 7 m (23 ft)

Angle: Within approx. 20° up and down, approx. 30° to the left and right

- Do not use scratch-proof protectors or covers.
- Do not use the following discs:
 - Discs with exposed adhesive from removed stickers or labels (rented discs, etc.).
 - Discs that are badly warped or cracked.
 - Irregularly shaped discs, such as heart shapes.

Tips for making data discs

MP3 (Extension: ".MP3", ".mp3")

Disc: DVD-R/RW, CD-R/RW

- Sampling frequency and compression rate: 8 kHz, 11.02 kHz, 12 kHz, 16 kHz, 22.05 kHz, 24 kHz (8 kbps to 160 kbps), 32 kHz, 44.1 kHz and 48 kHz (32 kbps to 320 kbps)
- ID3 tags: version 1, 2

JPEG (Extension: ".JPG", ".jpg", ".JPEG", ".jpeg")

Disc: DVD-R/RW, CD-R/RW

- JPEG files taken on a digital camera that conform to DCF Standard (Design rule for Camera File system) Version 1.0 are displayed.
 - Files that have been altered, edited or saved with computer picture editing software may not be displayed.
- This unit cannot display moving pictures, MOTION JPEG and other such formats, still pictures other than JPEG (e.g. TIFF), or play pictures with attached audio.

- There may be differences in the display order on the menu screen and computer screen.
- This unit cannot play files recorded using packet write.

DVD-R/RW

- Discs must conform to UDF bridge (UDF 1.02/ISO9660).
- This unit does not support multi-session. Only the default session is played.

CD-R/RW

- Discs must conform to ISO9660 level 1 or 2 (except for extended formats).
- This unit supports multi-session but if there are many sessions it takes more time for play to start. Keep the number of sessions to a minimum to avoid this.

Speaker installation option

Attaching to a wall

You can attach all of the speakers (except subwoofer) to a wall.

- The wall or pillar on which the speakers are to be attached should be capable of supporting 10 kg (22 lbs) per screw. Consult a qualified building contractor when attaching the speakers to a wall. Improper attachment may result in damage to the wall and speakers.

1 Drive a screw (not supplied) into the wall.

2 Fit the speaker securely onto the screw(s) with the hole(s).

■ Tips

Use the measurements indicated below to identify the screwing positions on the wall.

- Leave at least 20 mm (²⁵/₃₂") of space above the speaker and 10 mm (¹³/₃₂") on each side to allow enough space for fitting the speaker.

Maintenance

Clean this unit with a soft, dry cloth

- Never use alcohol, paint thinner or benzine to clean this unit.
- Before using chemically treated cloth, carefully read the instructions that came with the cloth.

Do not use commercially available lens cleaners as they may cause malfunction. Cleaning of the lens is generally not necessary although this depends on the operating environment.

Before moving the unit, ensure the disc tray is empty. Failure to do so will risk severely damaging the disc and the unit.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

The first step in the process of identifying a problem is to recognize that there is a problem. This can be done by looking at the current situation and comparing it to what you want or need. Once you have identified the problem, the next step is to define it clearly. This involves stating the problem in specific terms and identifying the goals you want to achieve. After defining the problem, you should brainstorm potential solutions. This can be done individually or in a group. Once you have generated several ideas, you should evaluate them based on their feasibility, effectiveness, and cost. The final step in the process is to implement the chosen solution and monitor its progress. If the solution does not work as expected, you may need to go back to the brainstorming stage and generate new ideas.
